### Section 3. Composition/information on ingredients

| Ingredient name   | %          | CAS number |  |
|---|------------|------------|--|
| barium sulfate  | 30 - <60   | 7727-43-7  |  |
| Phenol, polymer with formaldehyde, glycidyl ether (MW<=700) | 20 - <30   | 28064-14-4 |  |
| xylene  | 7 - <10    | 1330-20-7  |  |
| Mica-group minerals   | 5 - <7     | 12001-26-2 |  |
| titanium dioxide  | 5 - <7     | 13463-67-7 |  |
| crystalline silica, respirable powder (>10 microns)         | 3 - <5     | 14808-60-7 |  |
| crystalline silica, respirable powder (<10 microns)         | 3 - <5     | 14808-60-7 |  |
| ethylbenzene  | 1 - <2     | 100-41-4   |  |
| 2-methylpropan-1-ol   | 1 - <2     | 78-83-1    |  |
| carbon black, respirable powder                             | 0.1 - <0.2 | 1333-86-4  |  |

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

SUB codes represent substances without registered CAS Numbers.

### Section 4. First aid measures

| Description of necessary fi               | t aid measures  |
|---|---|
| Eye contact                               | : Remove contact lenses, irrigate copiously with clean, fresh water, holding the eyelids apart for at least 10 minutes and seek immediate medical advice.   |
| Inhalation                                | : Remove to fresh air. Keep person warm and at rest. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel.  |
| Skin contact                              | : Remove contaminated clothing and shoes. Wash skin thoroughly with soap and water or use recognized skin cleanser. Do NOT use solvents or thinners.  |
| Ingestion                                 | : If swallowed, seek medical advice immediately and show this container or label.<br>Keep person warm and at rest. Do NOT induce vomiting.  |
| Indication of immediate me                | cal attention and special treatment needed, if necessary  |
| Notes to physician<br>Specific treatments | <ul> <li>Treat symptomatically. Contact poison treatment specialist immediately if large</li> <li>quantities have been ingested or inhaled.</li> <li>No specific treatment.</li> </ul>  |
| Protection of first-aiders                | No action shall be taken involving any personal risk or without suitable training. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Wash contaminated clothing thoroughly with water before removing it, or wear gloves. |
| Potential acute health effec              |   |
| Eye contact                               | : Causes serious eye irritation.  |
| Inhalation                                | : Harmful if inhaled.   |
| Skin contact                              | : May be harmful in contact with skin. Causes skin irritation. Defatting to the skin. May cause an allergic skin reaction.  |
| Ingestion                                 | : No known significant effects or critical hazards.   |

#### See toxicological information (Section 11)

SIGMAGUARD 795 BASE GREEN

Date of issue

# Section 5. Fire-fighting measures

| Extinguishing media                               |   |
|---|---|
| Suitable extinguishing media                      | : Use dry chemical, CO <sub>2</sub> , water spray (fog) or foam.  |
| Unsuitable extinguishing media                    | : Do not use water jet.   |
| Specific hazards arising from the chemical        | : Flammable liquid and vapor. Runoff to sewer may create fire or explosion hazard.<br>In a fire or if heated, a pressure increase will occur and the container may burst,<br>with the risk of a subsequent explosion. This material is harmful to aquatic life with<br>long lasting effects. Fire water contaminated with this material must be contained<br>and prevented from being discharged to any waterway, sewer or drain. |
| Hazardous thermal decomposition products          | : Decomposition products may include the following materials:<br>carbon oxides<br>sulfur oxides<br>metal oxide/oxides   |
| Special protective actions for fire-fighters      | : Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool.  |
| Special protective<br>equipment for fire-fighters | <ul> <li>Fire-fighters should wear appropriate protective equipment and self-contained<br/>breathing apparatus (SCBA) with a full face-piece operated in positive pressure<br/>mode.</li> </ul>   |

# Section 6. Accidental release measures

### Personal precautions, protective equipment and emergency procedures

| For non-emergency<br>personnel | :  | No action shall be taken involving any personal risk or without suitable training.<br>Evacuate surrounding areas. Keep unnecessary and unprotected personnel from<br>entering. Do not touch or walk through spilled material. Shut off all ignition sources.<br>No flares, smoking or flames in hazard area. Avoid breathing vapor or mist.<br>Provide adequate ventilation. Wear appropriate respirator when ventilation is<br>inadequate. Put on appropriate personal protective equipment. |
|--------------------------------|----|---|
| For emergency responders       | :  | If specialized clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".   |
| Environmental precautions      |    | Avoid dispersal of spilled material and runoff and contact with soil, waterways,<br>drains and sewers. Inform the relevant authorities if the product has caused<br>environmental pollution (sewers, waterways, soil or air). Water polluting material.<br>May be harmful to the environment if released in large quantities.   |
| Methods and materials for co   | on | tainment and cleaning up  |
| Small spill                    | :  | Stop leak if without risk. Move containers from spill area. Use spark-proof tools   |

Stop leak it without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.

| 1.01 | 1 | .01 |  |
|------|---|-----|--|
|------|---|-----|--|

# Section 6. Accidental release measures

| Large spill | : Stop leak if without risk. Move containers from spill area. Use spark-proof tools<br>and explosion-proof equipment. Approach release from upwind. Prevent entry into<br>sewers, water courses, basements or confined areas. Wash spillages into an<br>effluent treatment plant or proceed as follows. Contain and collect spillage with non-<br>combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth<br>and place in container for disposal according to local regulations (see Section 13).<br>Dispose of via a licensed waste disposal contractor. Contaminated absorbent<br>material may pose the same hazard as the spilled product. Note: see Section 1 for<br>emergency contact information and Section 13 for waste disposal. |
|-------------|---|
|-------------|---|

# Section 7. Handling and storage

| Precautions for safe<br>handling                                   | Put on appropriate personal protective equipment (see Section 8). Eating, drinking<br>and smoking should be prohibited in areas where this material is handled, stored<br>and processed. Workers should wash hands and face before eating, drinking and<br>smoking. Remove contaminated clothing and protective equipment before entering<br>eating areas. Persons with a history of skin sensitization problems should not be<br>employed in any process in which this product is used. Do not get in eyes or on<br>skin or clothing. Do not ingest. Avoid breathing vapor or mist. Use only with<br>adequate ventilation. Wear appropriate respirator when ventilation is inadequate.<br>Do not enter storage areas and confined spaces unless adequately ventilated.<br>Keep in the original container or an approved alternative made from a compatible<br>material, kept tightly closed when not in use. Store and use away from heat, sparks,<br>open flame or any other ignition source. Use explosion-proof electrical (ventilating,<br>lighting and material handling) equipment. Use non-sparking tools. Take<br>precautionary measures against electrostatic discharges. To avoid fire or explosion,<br>dissipate static electricity during transfer by grounding and bonding containers and<br>equipment before transferring material. Empty containers retain product residue<br>and can be hazardous. Do not reuse container. |
|--|---|
| Conditions for safe storage,<br>including any<br>incompatibilities | Store between the following temperatures: 0 to 35°C (32 to 95°F). Store in accordance with local regulations. Store in a segregated and approved area. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Store locked up. Eliminate all ignition sources. Separate from oxidizing materials. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination. See Section 10 for incompatible materials before handling or use.   |

### Section 8. Exposure controls/personal protection

<u>Control parameters</u> <u>Occupational exposure limits</u>

# Section 8. Exposure controls/personal protection

| Ingredient name   | Exposure limits   |  |  |  |  |  |
|---|---|--|--|--|--|--|
| barium sulfate  | ACGIH TLV (United States, 3/2019).  |  |  |  |  |  |
|   | TWA: 5 mg/m <sup>3</sup> 8 hours. Form: Inhalable fraction  |  |  |  |  |  |

| aarban blaak, raanirabla naudar   | TWA: 40 ppm 8 hours.  |  |  |  |  |  |
| carbon black, respirable powder   | Minsitry of Labor and Employement (Brazil, 11/2001).  |  |  |  |  |  |
|   | TWA: 3.5 mg/m <sup>3</sup> 8 hours.   |  |  |  |  |  |
| procedures atmosphere or biolo<br>of the ventilation or<br>protective equipment<br>standards. Referen   | ins ingredients with exposure limits, personal, workplace<br>ogical monitoring may be required to determine the effectiveness<br>other control measures and/or the necessity to use respiratory<br>nt. Reference should be made to appropriate monitoring<br>nee to national guidance documents for methods for the<br>zardous substances will also be required.            |  |  |  |  |  |
| controls ventilation or other e contaminants below also need to keep g  | : Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapor or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment. |  |  |  |  |  |
| <ul> <li>Environmental exposure controls</li> <li>Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.</li> </ul> |   |  |  |  |  |  |

**Individual protection measures** 

| Section 8. Expos       | Section 8. Exposure controls/personal protection  |  |  |  |  |  |
|------------------------|---|--|--|--|--|--|
| Hygiene measures       | : Wash hands, forearms and face thoroughly after handling chemical products,<br>before eating, smoking and using the lavatory and at the end of the working period.<br>Appropriate techniques should be used to remove potentially contaminated clothing.<br>Contaminated work clothing should not be allowed out of the workplace. Wash<br>contaminated clothing before reusing. Ensure that eyewash stations and safety<br>showers are close to the workstation location.   |  |  |  |  |  |
| Eye protection         | : Chemical splash goggles.  |  |  |  |  |  |
| Skin protection        |   |  |  |  |  |  |
| Hand protection        | : Chemical-resistant, impervious gloves complying with an approved standard should<br>be worn at all times when handling chemical products if a risk assessment indicates<br>this is necessary. Considering the parameters specified by the glove manufacturer,<br>check during use that the gloves are still retaining their protective properties. It<br>should be noted that the time to breakthrough for any glove material may be<br>different for different glove manufacturers. In the case of mixtures, consisting of<br>several substances, the protection time of the gloves cannot be accurately<br>estimated. |  |  |  |  |  |
| Gloves                 | : butyl rubber  |  |  |  |  |  |
| Body protection        | : Personal protective equipment for the body should be selected based on the task<br>being performed and the risks involved and should be approved by a specialist<br>before handling this product. When there is a risk of ignition from static electricity,<br>wear anti-static protective clothing. For the greatest protection from static<br>discharges, clothing should include anti-static overalls, boots and gloves.   |  |  |  |  |  |
| Other skin protection  | : Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.   |  |  |  |  |  |
| Respiratory protection | : Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator. If workers are exposed to concentrations above the exposure limit, they must use appropriate, certified respirators. Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary.  |  |  |  |  |  |

# Section 10. Stability and reactivity

| Reactivity                         | : No specific test data related to reactivity available for this product or its ingredients.   |
|------------------------------------|--|
| Chemical stability                 | : The product is stable.   |
| Possibility of hazardous reactions | : Under normal conditions of storage and use, hazardous reactions will not occur.  |
| Conditions to avoid                | : When exposed to high temperatures may produce hazardous decomposition products.  |
| Incompatible materials             | : Keep away from the following materials to prevent strong exothermic reactions: oxidizing agents, strong alkalis, strong acids.     |
| Hazardous decomposition products   | : Depending on conditions, decomposition products may include the following materials carbon oxides sulfur oxides metal oxide/oxides |

### Section 11. Toxicological information

#### Information on toxicological effects

| Product/ingredient name  | Result                          | Species | Dose        | Exposure |
|--------------------------|---------------------------------|---------|-------------|----------|
| barium sulfate           | LD50 Dermal                     | Rat     | >2000 mg/kg | -        |
|                          | LD50 Oral                       | Rat     | >5000 mg/kg | -        |
| xylene                   | LD50 Dermal                     | Rabbit  | 1.7 g/kg    | -        |
| ,                        | LD50 Oral                       | Rat     | 4.3 g/kg    | -        |
| titanium dioxide         | LC50 Inhalation Dusts and mists | Rat     | >6.82 mg/l  | 4 hours  |
|                          | LD50 Dermal                     | Rabbit  | >5000 mg/kg | -        |
|                          | LD50 Oral                       | Rat     | >5000 mg/kg | -        |
| ethylbenzene             | LC50 Inhalation Vapor           | Rat     | 17.8 mg/l   | 4 hours  |
| -                        | LD50 Dermal                     | Rabbit  | 17.8 g/kg   | -        |

|  |          |   |  |

#### Delayed and immediate effects and also chronic effects from short and long term exposure : There are no data available on the mixture itself. This product contains crystalline **Conclusion/Summary** silica which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. For many PPG products, TiO2 is utilized as a raw material in a liquid coating formulation. In this case, the TiO2 particles are bound in a matrix with no meaningful potential for human exposure to unbound particles of TiO2 when the product is applied with a brush or roller. Sanding the coating surface or mist from spray applications may be harmful depending on the duration and level of exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Carbon black is utilized as a raw material in many liquid coating formulations. In this case, the carbon black particles are bound in a matrix with no meaningful potential for human exposure to unbound particles of carbon black when the product is applied with a brush or roller. Sanding the coating surface or mist from spray applications may be harmful depending on the duration and level of exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Most carbon blacks contain trace quantities of polyaromatic hydrocarbons (PAH). PAHs are not expected to be released in biological fluids and are therefore not likely available for biological activity. Exposure to component solvent vapor concentrations in excess of the stated occupational exposure limit may result in adverse health effects such as mucous membrane and respiratory system irritation and adverse effects on the kidneys, liver and central nervous system. Symptoms and signs include headache, dizziness, fatique, muscular weakness, drowsiness and, in extreme cases, loss of consciousness. Solvents may cause some of the above effects by absorption through the skin. There is some evidence that repeated exposure to organic solvent vapors in combination with constant loud noise can cause greater hearing loss than expected from exposure to noise alone. If splashed in the eyes, the liquid may cause irritation and reversible damage. Ingestion may cause nausea, diarrhea and vomiting. This takes into account, where known, delayed and immediate effects and also chronic effects of components from short-term and long-term exposure by oral, inhalation and dermal routes of exposure and eye contact. Short term exposure **Potential immediate** : There are no data available on the mixture itself. effects : There are no data available on the mixture itself. **Potential delayed effects** Long term exposure **Potential immediate** There are no data available on the mixture itself. effects **Potential delayed effects** : There are no data available on the mixture itself. Potential chronic health effects Not available. General : May cause damage to organs through prolonged or repeated exposure. Prolonged or repeated contact can defat the skin and lead to irritation, cracking and/or dermatitis. Once sensitized, a severe allergic reaction may occur when subsequently exposed to very low levels. Carcinogenicity : May cause cancer. Risk of cancer depends on duration and level of exposure. **Mutagenicity** : No known significant effects or critical hazards. **Reproductive toxicity** : No known significant effects or critical hazards.

#### Mobility in soil

Soil/water partition coefficient (Koc)

: Not available.

Other adverse effects

: No known significant effects or critical hazards.

### Section 13. Disposal considerations

#### **Disposal methods**

: The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and nonrecyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Care should be taken when handling emptied containers that have not been cleaned or rinsed out. Empty containers or liners may retain some product residues. Vapor from product residues may create a highly flammable or explosive atmosphere inside the container. Do not cut, weld or grind used containers unless they have been cleaned thoroughly internally. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.
