SAFETY DATA SHEET

Date of issue/Date of revision 29 May 2021 Version 5

Section 1. Identification		
Product name	: SIGMATHERM 230 BASE	
Product code	: 00297988	
Other means of identification	: Not available.	
Product type	: Liquid.	
Relevant identified uses of	the substance or mixture and uses advised against	
Product use	: Professional applications, Used by spraying.	
Use of the substance/ mixture	: Coating.	
Uses advised against	: Not applicable.	
Manufacturer	 PPG Industries, Inc. One PPG Place Pittsburgh, PA 15272 #12) 434-4515 (U.S.) 	
Emergency telephone number	: (412) 434-4515 (U.S.) (514) 645-1320 (Canada) SETIQ Interior de la República: 800-00-214-00 (México) SETIQ Ciudad de México: (55) 5559-1588 (México)	
Technical Phone Number	: 888-977-4762	

Section 2. Hazards identification

OSHA/HCS status	: This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).
Classification of the substance or mixture	 FLAMMABLE LIQUIDS - Category 3 ACUTE TOXICITY (inhalation) - Category 4 SKIN IRRITATION - Category 2 SERIOUS EYE DAMAGE - Category 1 SKIN SENSITIZATION - Category 1 CARCINOGENICITY - Category 1A SPECIFIC TARGET ORGAN TOXICITY (SINGLE EXPOSURE) (Respiratory tract irritation) - Category 3 SPECIFIC TARGET ORGAN TOXICITY (REPEATED EXPOSURE) - Category 1 Fercentage of the mixture consisting of ingredient(s) of unknown acute toxicity: 36.4% (oral), 43.1% (dermal), 75.7% (inhalation)

Product name SIGMATHERM 230 BASE

Section 2. Hazards identification

This product contains TiO2 which has been classified as a GHS Carcinogen Category 2 based on its IARC 2B classification. For many PPG products, TiO2 is utilized as a raw material in a liquid coating formulation. In this case, the TiO2 particles are bound in a matrix with no meaningful potential for human exposure to unbound particles of TiO2 when the product is applied with a brush or roller. Sanding the coating surface or mist from spray applications may be harmful depending on the duration and level of exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8).

GHS label elements	
Hazard pictograms	
Signal word	: Danger
Hazard statements	 Fammable liquid and vapor. Causes skin irritation. May cause an allergic skin reaction. Causes serious eye damage. Harmful if inhaled. May cause respiratory irritation. May cause cancer. Causes damage to organs through prolonged or repeated exposure. (hearing organs)
Precautionary statements	
Prevention	: Øbtain special instructions before use. Do not handle until all safety precautions have been read and understood. Wear protective gloves, protective clothing and eye or face protection. Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking. Use explosion-proof electrical, ventilating or lighting equipment. Use non-sparking tools. Take action to prevent static discharges. Use only outdoors or in a well-ventilated area. Do not breathe vapor. Do not eat, drink or smoke when using this product. Wash thoroughly after handling. Contaminated work clothing must not be allowed out of the workplace.
Response	: F exposed or concerned: Get medical advice or attention. IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or doctor if you feel unwell. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water. Wash contaminated clothing before reuse. IF ON SKIN: Wash with plenty of water. If skin irritation or rash occurs: Get medical advice or attention. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER or doctor.
Storage	: Store locked up. Store in a well-ventilated place. Keep container tightly closed. Keep cool.
Disposal	: Dispose of contents and container in accordance with all local, regional, national and international regulations.

Product name SIGMATHERM 230 BASE

Section 2. Hazards identification

Supplemental label elements	: Sanding and grinding dusts may be harmful if inhaled. This product contains crystalline silica which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. Repeated exposure to high vapor concentrations may cause irritation of the respiratory system and permanent brain and nervous system damage. Inhalation of vapor/aerosol concentrations above the recommended exposure limits causes headaches, drowsiness and nausea and may lead to unconsciousness or death. Avoid contact with skin and clothing. Wash thoroughly after handling. Emits toxic fumes when heated.
Hazards not otherwise classified	: Prolonged or repeated contact may dry skin and cause irritation.

Section 3. Composition/information on ingredients

: Mixture

Substance/mixture	
Product name	

SIGMATHERM 230 BASE

Ingredient name	%	CAS number
varium sulfate	≥20 - ≤43	7727-43-7
Phenol, polymer with formaldehyde, glycidyl ether (MW<=700)	≥20 - ≤50	28064-14-4
xylene	≥10 - ≤12	1330-20-7
Talc, not containing asbestiform fibers	≥5.0 - ≤10	14807-96-6
titanium dioxide	≥5.0 - ≤10	13463-67-7
Mica-group minerals	≥1.0 - ≤5.0	12001-26-2
2-methylpropan-1-ol	≥1.0 - ≤4.5	78-83-1
crystalline silica, respirable powder (>10 microns)	≥1.0 - ≤5.0	14808-60-7
crystalline silica, respirable powder (<10 microns)	≥1.0 - ≤5.0	14808-60-7
ethylbenzene	≥0.10 - ≤2.1	100-41-4

SUB codes represent substances without registered CAS Numbers.

Any concentration shown as a range is to protect confidentiality or is due to batch variation.

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

If ingestion, irritation, any type of overexposure or symptoms of overexposure occur during or persists after use of this product, contact a POISON CONTROL CENTER, EMERGENCY ROOM OR PHYSICIAN immediately; have Safety Data Sheet information available. Never give anything by mouth to an unconscious or convulsing person. **Description of necessary first aid measures**

Eye contact Check for and remove any contact lenses. Immediately flush eyes with running water for at least 15 minutes, keeping eyelids open. Seek immediate medical attention. Inhalation Remove to fresh air. Keep person warm and at rest. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. Remove contaminated clothing and shoes. Wash skin thoroughly with soap and water or use recognized skin cleanser. Do NOT use solvents or thinners.

United States Page: 3/17

Product name SIGMATHERM 230 BASE

Section 4. First aid measures

Ingestion

: If swallowed, seek medical advice immediately and show this container or label. Keep person warm and at rest. Do NOT induce vomiting.

Most important symptoms/effects, acute and delayed

Potential acute health effect	<u>s</u>
Eye contact	: Causes serious eye damage.
Inhalation	: Harmful if inhaled. May cause respiratory irritation.
Skin contact	: Causes skin irritation. Defatting to the skin. May cause an allergic skin reaction.
Ingestion	: No known significant effects or critical hazards.
Over-exposure signs/sympto	<u>oms</u>
Eye contact	: Adverse symptoms may include the following:
	pain
	watering
	redness
Inhalation	: Adverse symptoms may include the following:
	respiratory tract irritation
Skin contact	coughing : Adverse symptoms may include the following:
Skin contact	pain or irritation
	redness
	dryness
	cracking
	blistering may occur
Ingestion	: Adverse symptoms may include the following:
	stomach pains
Indication of immediate medi	cal attention and special treatment needed, if necessary
Notes to physician	: Treat symptomatically. Contact poison treatment specialist immediately if large
	quantities have been ingested or inhaled.
Specific treatments	: No specific treatment.
Protection of first-aiders	: No action shall be taken involving any personal risk or without suitable training. If it is
	suspected that fumes are still present, the rescuer should wear an appropriate mask or
	self-contained breathing apparatus. It may be dangerous to the person providing aid to
	give mouth-to-mouth resuscitation. Wash contaminated clothing thoroughly with water
	before removing it, or wear gloves.

See toxicological information (Section 11)

Section 5. Fire-fighting measures

Extinguishing media	
Suitable extinguishing media	: Use dry chemical, CO ₂ , water spray (fog) or foam.
Unsuitable extinguishing media	: Do not use water jet.

Product name SIGMATHERM 230 BASE

Section 5. Fire-fighting measures

Specific hazards arising from the chemical	: Mammable liquid and vapor. In a fire or if heated, a pressure increase will occur and the container may burst, with the risk of a subsequent explosion. Vapors may accumulate in low or confined areas or travel a considerable distance to a source of ignition and flash back. Runoff to sewer may create fire or explosion hazard.
Hazardous thermal decomposition products	: Decomposition products may include the following materials: carbon oxides sulfur oxides metal oxide/oxides
Special protective actions for fire-fighters	: Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool.
Special protective equipment for fire-fighters	: Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

For non-emergency personnel For emergency responders	 No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Shut off all ignition sources. No flares, smoking or flames in hazard area. Do not breathe vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment. If specialized clothing is required to deal with the spillage, take note of any information in 	
Tor emergency responders	Section 8 on suitable and unsuitable materials. See also the information in "For non- emergency personnel".	
Environmental precautions	Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).	
Methods and materials for co	tainment and cleaning up	
Small spill	: Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.	
Large spill	: Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.	

Product name SIGMATHERM 230 BASE

Section 7. Handling and storage

Precautions for safe handling

Protective measures	: Put on appropriate personal protective equipment (see Section 8). Persons with a history of skin sensitization problems should not be employed in any process in which this product is used. Avoid exposure - obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Do not get in eyes or on skin or clothing. Do not breathe vapor or mist. Do not ingest. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Do not enter storage areas and confined spaces unless adequately ventilated. Keep in the original container or an approved alternative made from a compatible material, kept tightly closed when not in use. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. Use only non-sparking tools. Take precautionary measures against electrostatic discharges. Empty containers retain product residue and can be hazardous. Do not reuse container.
Special precautions	: Vapors may accumulate in low or confined areas or travel a considerable distance to a source of ignition and flash back. Vapors are heavier than air and may spread along floors. If this material is part of a multiple component system, read the Safety Data Sheet(s) for the other component or components before blending as the resulting mixture may have the hazards of all of its parts.
Advice on general occupational hygiene	: Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.
Conditions for safe storage, including any incompatibilities	: Store between the following temperatures: 0 to 35°C (32 to 95°F). Store in accordance with local regulations. Store in a segregated and approved area. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Store locked up. Eliminate all ignition sources. Separate from oxidizing materials. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

Section 8. Exposure controls/personal protection

Respiratory protection: Respirator selection must be based on known or anticipated exposure levels, the
hazards of the product and the safe working limits of the selected respirator. If workers
are exposed to concentrations above the exposure limit, they must use appropriate,
certified respirators. Use a properly fitted, air-purifying or air-fed respirator complying
with an approved standard if a risk assessment indicates this is necessary.
The respiratory protection shall be in accordance to 29 CFR 1910.134.

ethylbenzene	-	2B	-

Carcinogen Classification code:

IARC: 1, 2A, 2B, 3, 4 NTP: Known to be a human carcinogen; Reasonably anticipated to be a human carcinogen OSHA: + Not listed/not regulated: -

Reproductive toxicity

Conclusion/Summary : There are no data available on the mixture itself.

Teratogenicity

Conclusion/Summary : There are no data available on the mixture itself.

Specific target organ toxicity (single exposure)

Name	Category	Route of exposure	Target organs
x ylene	Category 3	-	Respiratory tract irritation
Talc, not containing asbestiform fibers	Category 3	-	Respiratory tract irritation
2-methylpropan-1-ol	Category 3	-	Respiratory tract irritation
	Category 3		Narcotic effects

Specific target organ toxicity (repeated exposure)

Name		Route of exposure	Target organs
	Category 1	inhalation	-
	Category 2	-	hearing organs

Target organs

: Contains material which causes damage to the following organs: liver, spleen, brain, bone marrow.

Contains material which may cause damage to the following organs: kidneys, lungs, the nervous system, cardiovascular system, upper respiratory tract, immune system, skin, central nervous system (CNS), ears, eye, lens or cornea.

Aspiration hazard

Name	Result
	ASPIRATION HAZARD - Category 1 ASPIRATION HAZARD - Category 1

Information on the likely routes of exposure

Potential acute health effects

Product name SIGMATHERM 230 BASE

Section 11. Toxicological information

Inhalation : Harmful if inhaled. May cause respiratory irritation. Skin contact : Causes skin irritation. Defating to the skin. May cause an allergic skin reaction. Ingestion : No known significant effects or critical hazards. Over-exposure signs/symptoms : Adverse symptoms may include the following: pain watering redness Inhalation : Adverse symptoms may include the following: pain or inflation coupting Skin contact : Adverse symptoms may include the following: redness dryness Ingestion : Adverse symptoms may include the following: redness dryness cracking billstering may occur : Adverse symptoms may include the following: stomach pains Delayed and immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or mist form sarp sapplications. This product contains TiO2 which has been classified as a GHS Carcinogen Category : based on its IARC 2B classification. For many PPG products, TiO2 is ullized as a raw material in a liquid costing formulation. In this case, the TiO2 particles are bound in a matrix with no meaningflup potential for human exposure to unbound particles of TiO2 when the product is applied with a brush or roller. Sanding the coating surface or mist from spray applicatioms may be harthul depending on the duration and deveris	Inhalation : Harmful if inhaled. May cause respiratory irritation. Skin contact : Causes skin irritation. Defating to the skin. May cause an allergic skin reaction. Ingestion : No known significant effects or critical hazards. Over-exposure signs/symptoms : Adverse symptoms may include the following: pain watering respiratory tract triation coughing Skin contact : Adverse symptoms may include the following: respiratory tract triation coughing Skin contact : Adverse symptoms may include the following: respiratory tract triation coughing Ingestion : Adverse symptoms may include the following: respiratory tract triation redness dryness cracking Delayed and immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to ubust from sanding surfaces or mist from spray applications. This product contains TO2 which has been classified as a GHS carcinogen Category based on its IARC 2B classification. To many PEG products, TiO2 is durate or mix from spray applications in excess of the stated occupation and level of exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Exposure to component advers health effects such as mucous membrane and respiratory systems. Symptoms and, sings include heedache, dizziness, fatigue, muscular weakness, drowsiness and, in exterme cases, loss of consciousnes	Eye contact	: Causes serious eye damage.
Skin contact : Causes skin irritation. Defatting to the skin. May cause an allergic skin reaction. Ingestion : No known significant effects or critical hazards. Over-exposure signs/symptoms : Adverse symptoms may include the following: pain watering redness Inhalation : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: stomach pains drives graptoms may include the following: stomach pains drives graptoms may include the following: stomach pains Delayed and immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic: which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. This product contains rol cough formulation. In this case, the TiO2 particles are bound in a matrix with no meaningful potential for human exposure to unbound particles of TiO2 when the product is applied with a bury weak reserve to bound an a matrix with no meaningful potential for human exposure to unbound particles of TiO2 when the product is applications and level of exposure to noise alone. If yeakset devises and and there of exposure to noise alone. If splashed in the eyst, he liquid may cause effects on t	Skin contact : Causes skin irritation. Defatting to the skin. May cause an allergic skin reaction. Ingestion : No known significant effects or critical hazards. Over-exposure signs/symptoms : Adverse symptoms may include the following: pain watering respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: respiratory tract irritation redness dryness cracking bilstering may occur Ingestion : Adverse symptoms may include the following: stomach pains Staged and immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. This product contains from sort or linicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces are mixt with no meaningful potential for human exposure to unbund particles of TIO2 which has been classified as a GHS Carcinogen Category based on its IARC 2B classification. For many PPG products, TIO2 is utilized as raw material in a liquid coating formulation. In this case, low of the stated occupation and level of exposure to dust from spray applications and level of exposure and require the use of appropriate person	-	
Ingestion : No known significant effects or critical hazards. Over exposure sign/symptoms Eye contact : Adverse symptoms may include the following: pain watering redness Inhalation : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: redness dryness cracking bilistering may occur Ingestion : Adverse symptoms may include the following: somach pains or acting Delayed and immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or misit from spray applications. This product contains TiO2 which has been classified as a CHS carcinogen Category based on its IARC 2B classification. The many PEG products, TiO2 is which the product is applied with a brush or roller. Sanding the coating surface or misit from spray applications may be abarnful depending on the duration and level of exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Exposure to component advers health effects solvents may cause some of the above effects of adsort from spray applications. Ins takes into account, where know, delayed and inmediate effects and also chronic effects of components from short-term and long-term exposure by oral, inha	Ingestion : No known significant effects or critical hazards. Over exposure sign/symptoms Eye contact : Adverse symptoms may include the following: pain watering redness Inhalation : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: respiratory tract irritation coughing Ingestion : Adverse symptoms may include the following: respiratory tract irritation redness dryness cracking Distering may occur Ingestion : Adverse symptoms may include the following: stomach pains Delayed and Immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. This product contains TiO2 which has been classified as a CHS carcinogen Category based on its IARC 2B classification. The many PEQ products, TiO2 is which the product is of TiO2 when the product is applied with a brush or roller. Sanding the coating surface or mist from spray applications in excess of the stated occupational protective equipment and/or exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Exposure to component solyent vapor concentrations in excess of the stated occupational protective equipment and/or engineering controls (see Section 8). Exposure to component solye		
Eye contact : Adverse symptoms may include the following: pain watering redness Inhalation :: Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: pain or irritation rechess dryness cracking bilistering may occur Ingestion :: Adverse symptoms may include the following: stomach pains Delayed and immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. This product contains TiO2 which has been classified as a GHS Carcinogen Category based on its IARC 2B classification. For many PPC products, TiO2 suffices are bound in a matrix with no meaningful potential for human exposure to unbound particles of TiO2 when the product is applied with a brush or roller. Sanding the coating surface or mist from spray applications may be harmful depending on the duration and level of exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Exposure to component solvent vapor concentrations in excess of the stated occupational exposure limit may result in advers health effects such as mucous membrane and respiratory system irritation and adversa forces to the kidneys, liver and central nervous system. Symptoms and signs include headache, dizziness, fatigue, muscular weakness, drowsiness and, in extreme cases, loss of consciousness. Solvents may cause some of the above effects by absorption through the skin. There is so	Eye contact : Adverse symptoms may include the following: pain watering redness Inhalation :: Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: pain or irritation redness dryness cracking bilistering may occur Ingestion :: Adverse symptoms may include the following: stomach pains Delayed and immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. This product contains TiO2 which has been classified as a GHS Carcinogen Category based on tis IARC 2B classification. For many PPC products, TiO2 particles are bound in a matrix with no meaningful potential for human exposure to unbound particles of TiO2 when the product is applied with a brush or roller. Sanding the coating surface or mist from spray applications may be harmful depending on the duration and level of exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Exposure to component solvent vapor concentrations in excess. Otherst may cause some of the above effects by absorption through the skin. There is some evidence that repeated exposure to organic solvent vapors in combination with constant loud noise can cause, diarrhea and vomiting. This takes into account, where known, delayed and immediate effects and also chronic effects of components from short-term and long-term exposure by oral, inhalation and dermal routes of exposure and ey	Ingestion	• • •
pain watering redness Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: pain or irritation redness dryness cracking bilistering may occur Ingestion Ingestion : Adverse symptoms may include the following: stomach pains stomach pains Delayed and immediate offects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. This product contains crystalline silic This product contains TIO2 which has been classified as a GHS Carcinogen Category based on its IARC 2B classification. For many PPG product vertices are bound in a matrix with no meaningful potential for human exposure to unbound particles of TiO2 when the product is applied with a brush or roller. Sanding the cating surface or mist from spray applications in excess of the stated occupational exposure inmit and yreault in adverse health effects such as mucous membrane and respiratory system initiation and adverse effects on the kidneys, liver and central nervous system. Symptoms and signs include headache, diziness, fatigue, muscular weakness, drowsinese and, in extreme cases, loss of consclousness. Solvents may c	pain watering redness Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: pain or irritation redness dryness cracking bilistering may occur Ingestion Ingestion : Adverse symptoms may include the following: stomach pains stomach pains Delayed and immediate offects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains are applications. The risk of cancer depends on the duration and level of exposure to dust from short and long term exposure to concoment solven. TiO2 which has been classified as a GHS Cancinogen Category based on its IARC 2B classification. For many PPG product, TiO2 is utilized as raw matrix with no meaningful potential for hu	-	5
pain watering redness Adverse symptoms may include the following: respiratory tract irritation cougling Skin contact Adverse symptoms may include the following: pain or irritation redness dryness cracking bilistering may occur Ingestion Ingestion Adverse symptoms may include the following: stomach pains Stomach pains Delayed and immediate effects and also chronic effects from short and long term exposure Conclusion/Summary There are no data available on the mixture itself. This product contains crystalline silic: This product contains TIO2 which has been classified as a GHS Carcinogen Category: based on its IARC 2B classification. For mary PPG products are bound in a matrix with no meaningful potential for human exposure to unbound particles are bound in a matrix with no meaningful potential for human exposure inmit may result in adverse effects on the kidneys, liver and central nervous system. Symptoms and signs include headache, diziness, fatigue, muscular weakness, drowsiness and, in extreme cases, loss of consciousness. Solvents may cause some of the above effects by absorption through the skin. There is some evidence that repeated exposure to organic solvent vapor concentrations in combination with constant loud noise can cause greater hearing loss than expected from exposure to orise alone. If splashed in the eyes, the liquid may cause and effects such as couse in couls in pay clause and exporecide damage. Ingestion may cause and errain a lowed c	pain watering redness pain valering redness Inhalation : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact :: Adverse symptoms may include the following: pain or irritation redness dryness cracking bilistering may occur Ingestion :: Adverse symptoms may include the following: stomach pains Delayed and immediate offects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or misit from spray applications. This product contains TIO2 which has been classified as a GHS Carcinogen Category based on its IARC 2B classification. For many PPG products, TiO2 is utilized as a raw material in a liquid coating formulation. In this case, the TiO2 particles are bound in a matrix with no meaningful potential for human exposure to unbound particles of TiO2 when the product is applied with a brush or roller. Sanding the cating surface or mist from spray applications may be harmful depending on the duration and level of exposure and require the use of appropriate personal protective equipment and/or engineering control is (see Section B). Exposure to component solvent vapor concentrations in excess of the stated occupational exposure init may result in advers effects on the kidneys, liver and central nervous system. Symptoms and signs include headache, dizziness, faltgue, muscular weakness, drowsiness and, in extreme cases, loss of ocnosciousness. Solvents may cause some of the above effects by absorption through the skin. There is some evidence that repeated expos	Eve contact	: Adverse symptoms may include the following:
Inhalation : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: pain or irritation redness dryness cracking bistering may occur Ingestion : Adverse symptoms may include the following: stomach pains Delayed and Immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. Their some construction is in construction in and level of exposure to dust from sanding surfaces or mist from spray applications. This product contains TIO2 which has been classified as a GHS Carcinogen Category: based on its IARC 2B classification. For many PPG products, TIO2 is utilized as a raw material in a liquid coating formulation. In this case, the TIO2 particles are bound in a matrix with no meaningful potential for human exposure to unbound particles of TIO2 when the product size of the 3D. Exposure to component solvent vapor concentrations in excess of the stated occupational exposure lowed when yees of the stated occupational exposure to require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Exposure initiation and adverse effects on the kidneys, liver and central nervous system. Symptoms and signs include headache, dizziness, fatigue, muscular weakness, dowsiness and, in extreme cases, loss of consciousness. Solvents may cause some of the eyes, the liquid may cause erist in combination with constant loud noise can cause greater thearing loss than expected from exposure to noise alone. If splashed in the eyes, the liquid may cause irintation and reversible damage, logestion may cause nause, diarrise	Inhalation : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: pain or irritation redness dryness cracking bistering may occur Ingestion : Adverse symptoms may include the following: stormach pains Delayed and immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. This product contains TIO2 which has been classified as a CHS Carcinogen Category based on its IARC 2B classification. For many PPG products, TiO2 is utilized as a real when the product is applied with a brush or roller. Sanding the coating surfaces or mist from spray applications may be harmful depending on the duration and level of exposure to despropriate personal protective equipment and/or engineering control (see Section 8). Exposure lordcet, mixing adverse effects on the kidneys, liver and central nervous system. Symptoms and signs include headatch, dizziness, fatigue, muscular weakness, drowsiness and , in extreme cases, loss of consciousnes. Solvents may cause some of the exposure to engine include headache, dizziness, fatigue, muscular weakness, drowsiness and also chronic effects on the kidneys, liver and central nervous system. Symptoms and signs include headatche, dizziness, fatigue, muscular weakness, drowsiness and signs include headache, dizziness, fatigue, muscular weaknes, drowsiness and sion chronic effects in compination with c		
Inhalation : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: pain or irritation redness dryness cracking bilstering may occur Ingestion : Adverse symptoms may include the following: stomach pains Delayed and immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silic which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. This product contains TiO2 which has been classified as a GHS Carcinogen Category based on its IARC 2B classification. For many PPG products, TiO2 is utilized as a raw material in a liquid coating formulation. In this case, the TiO2 particles are bound in a matrix with no meaningful potential for human exposure to unbound particles or TiO2 when the product is applied with a brush or roller. Sanding the coating surface or mist from spray applications may be harmful depending on the duration and level of exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Exposure to component solvent vapor concentrations in excess of the stated occupational exposure init may result in adverse effects on the kidneys, liver and central nervous system. Symptoms and signs include headach, diziness, futyue, muxcular weakness, drowiness, di in extreme cases, loss of consciousness. Solvents may cause nause qui in the aye cause iritation and reversible damage. Ingestion may cause nause qifarete and voriting <td>Inhalation : Adverse symptoms may include the following: respiratory tract irritation coughing Skin contact : Adverse symptoms may include the following: pain or irritation redness dryness cracking bilstering may occur Ingestion : Adverse symptoms may include the following: stomach pains Delayed and immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. For many PPG products, TiO2 is utilized as a raw material in a liquid coating formulation. In this case, the TiO2 particles are bound in a matrix with no meaningful potential for human exposure to unbound particles of TiO2 when the product is applied with a brush or roller. Sanding the coating surface or mist from spray applications may be harmful depending on the duration and level of exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Exposure to component solvent vapor concentrations in excess of the stated occupational exposure limit may result in advers health effects such as mucous membrane and respiratory system irritation and advers effects on the kidneys, liver and central nervous system. Symptoms and signs include headache, dizziness, fatigue, muscular weakness, drowsiness and, in extreme cases, loss of consciousness. Solvents may cause some of the above effects by absorption through the skin. There is some evidence that repeated exposure to organic solvent vapors in combination with constant loud noise can cause greater hearing loss than expected from exposure to noise alone. If splashed in the eyes, the liquid may cause irritation and reversible damage. Ingestion may cause ausea, diarrhea and vorniting. This takes into account, where known, delayed and immediate effects and also chronic effects of components from short-	Skin contact	
indensity indensity Ingestion : Adverse symptoms may include the following: stomach pains Delayed and immediate effects and also chronic effects from short and long term exposure Conclusion/Summary : There are no data available on the mixture itself. This product contains crystalline silica which can cause lung cancer or silicosis. The risk of cancer depends on the duration and level of exposure to dust from sanding surfaces or mist from spray applications. This product contains TiO2 which has been classified as a CHS Carcinogen Category is based on its IARC 2B classification. For many PC products, TiO2 is utilized as a raw material in a liquid coating formulation. In the Case, the TiO2 particles are bound in a matrix with no meaningful potential for human exposure to unbound particles of TiO2 when the product is applied with a brush or roller. Sanding the coating surface or mist from spray applications may be harmful depending on the duration and level of exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Exposure to component solvent vapor concentrations in excess of the stated occupational exposure limit may result in advers health effects such as muccus membrane and respiratory system irritation and adverse effects on the kidneys, liver and central nervous system. Symptoms and signs include headache, dizziness, faltigue, muscular weakness, drowsiness and, in extreme cases, loss of consciousness. Solvents may cause some of the above effects by absorption through the skin. There is some evidence that repeated exposure to organic solvent vapors in combination with constant loud noise can cause greater hearing loss than expected from exposure and long-term exposure by oral, inhalation and derers source onoise alone. In this case, the TiO2 particles are bound in a matrix with no meaningful potential for human exposure to unbound particles of TiO2 when the product is applied with a brush or roller. Sanding the coating surface or mist from spray applications may be harmful depending on the duration and level of exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Exposure to component solvent vapor concentrations in excess of the stated occupational exposure limit may result in adverse health effects such as mucous membrane and respiratory system irritation and adverse effects on the kidneys, liver and central nervous system. Symptoms and signs include headache, dizziness, fatigue, muscular weakness, drowsiness and, in extreme cases, loss of consciousness. Solvents may cause some of the above effects by absorption through the skin. There is some evidence that repeated exposure to organic solvent vapors in combination with constant loud noise can cause greater hearing loss than expected from exposure to noise alone. If splashed in the eyes, the liquid may cause irritation and reversible damage. Ingestion may cause nausea, diarrhea and vomiting. This takes into account, where known, delayed and immediate effects and also chronic effects of components from short-term and long-term exposure by oral, inhalation and dermal routes of exposure and eye contact. Short term exposure Potential immediate Fotential immediate There are no data available on the mixture itself. Long term exposure Potential immediate There are no data available on the mixture itself. Effects	 material in a liquid coating formulation. In this case, the TiO2 particles are bound in a matrix with no meaningful potential for human exposure to unbound particles of TiO2 when the product is applied with a brush or roller. Sanding the coating surface or mist from spray applications may be harmful depending on the duration and level of exposure and require the use of appropriate personal protective equipment and/or engineering controls (see Section 8). Exposure to component solvent vapor concentrations in excess of the stated occupational exposure inritation and adverss effects on the kidneys, liver and central nervous system. Section 11. Toxicological information

Potential delayed effects	1	There are no data available on the mixture itself.
Potential chronic health eff	ect	2
General	:	Causes damage to organs through prolonged or repeated exposure. Prolonged or repeated contact can defat the skin and lead to irritation, cracking and/or dermatitis. Once sensitized, a severe allergic reaction may occur when subsequently exposed to very low levels.
Carcinogenicity	1	May cause cancer. Risk of cancer depends on duration and level of exposure.
Mutagenicity	:	No known significant effects or critical hazards.
Reproductive toxicity	:	No known significant effects or critical hazards.
Numerical measures of toxic	situ	

Numerical measures of toxicity

Acute toxicity estimates

Product/ingredient name	Oral (mg/ kg)	Dermal (mg/kg)	Inhalation (gases) (ppm)	Inhalation (vapors) (mg/l)	Inhalation (dusts and mists) (mg/ I)
SIGMATHERM 230 BASE	14382.4	2696.5	N/A	21.2	2.7
barium sulfate	N/A	2500	N/A	N/A	N/A

Section 12. Ecological information

Section 13. Disposal considerations

Disposal methods	: The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Care should be taken when handling emptied containers that have not been cleaned or rinsed out. Empty containers or liners may retain some product residues. Vapor from product residues may create a highly flammable or explosive atmosphere inside the container. Do not cut, weld or grind used containers unless they have been cleaned thoroughly internally. Avoid dispersal of spilled material and runoff and contact
	with soil, waterways, drains and sewers.

Disposal should be in accordance with applicable regional, national and local laws and regulations.

Refer to Section 7: HANDLING AND STORAGE and Section 8: EXPOSURE CONTROLS/PERSONAL PROTECTION for additional handling information and protection of employees. Section 6. Accidental release measures

	DOT	IMDG	IATA

14. Transport information

Additional information

DOT	: Package sizes shipped in quantities less than the product reportable quantity are not subject to the
	RQ (reportable quantity) transportation requirements.
IMDG	: This class 3 viscous liquid is not subject to regulation in packagings up to 450 L according to 2.3.2.5.
ΙΑΤΑ	: None identified.

Special precautions for user : Transport within user's premises: always transport in closed containers that are upright and secure. Ensure that persons transporting the product know what to do in the event of an accident or spillage.

	SKIN SENSITIZATION - Category 1
	CARCINOGENICITY - Category 1A
	SPECIFIC TARGET ORGAN TOXICITY (SINGLE EXPOSURE) (Respiratory tract
	irritation) - Category 3
	SPECIFIC TARGET ORGAN TOXICITY (REPEATED EXPOSURE) - Category 1
	HNOC - Defatting irritant

Composition/information on ingredients

Name	%	Classification
Phenol, polymer with	≥20 - ≤50	SKIN IRRITATION - Category 2
formaldehyde, glycidyl ether		EYE IRRITATION - Category 2A
(MW<=700)		SKIN SENSITIZATION - Category 1B
xylene	≥10 - ≤12	FLAMMABLE LIQUIDS - Category 3
		ACUTE TOXICITY (dermal) - Category 4
		ACUTE TOXICITY (inhalation) - Category 4
		SKIN IRRITATION - Category 2
		EYE IRRITATION - Category 2A
		SPECIFIC TARGET ORGAN TOXICITY (SINGLE EXPOSURE)
		(Respiratory tract irritation) - Category 3
Tale not containing achaptiform	≥5.0 - ≤10	ASPIRATION HAZARD - Category 1
Talc, not containing asbestiform	≥5.0 - ≤10	SPECIFIC TARGET ORGAN TOXICITY (SINGLE EXPOSURE) (Respiratory tract irritation) - Category 3
titanium dioxide	≥5.0 - ≤10	CARCINOGENICITY - Category 2
2-methylpropan-1-ol	≥1.0 - ≤4.5	FLAMMABLE LIQUIDS - Category 3
	=1.0 - =4.0	SKIN IRRITATION - Category 2
		SERIOUS EYE DAMAGE - Category 1
		SPECIFIC TARGET ORGAN TOXICITY (SINGLE EXPOSURE)
		(Respiratory tract irritation) - Category 3
		SPECIFIC TARGET ORGAN TOXICITY (SINGLE EXPOSURE)
		(Narcotic effects) - Category 3
		HNOC - Defatting irritant
crystalline silica, respirable	≥1.0 - ≤5.0	CARCINOGENICITY - Category 1A
<u></u>	<u> </u>	United States Page: 15/17

Product name SIGMATHERM 230 BASE

Section 15. Regulatory information

powder (>10 microns) crystalline silica, respirable powder (<10 microns)	≥1.0 - ≤5.0	CARCINOGENICITY - Category 1A SPECIFIC TARGET ORGAN TOXICITY (REPEATED EXPOSURE) - Category 1
ethylbenzene	≥0.10 - ≤2.1	FLAMMABLÉ LIQUIDS - Category 2 ACUTE TOXICITY (inhalation) - Category 4 CARCINOGENICITY - Category 2 SPECIFIC TARGET ORGAN TOXICITY (REPEATED EXPOSURE) - Category 2 ASPIRATION HAZARD - Category 1 HNOC - Defatting irritant

SARA 313

Supplier notificationChemical name xylene ethylbenzene	<u>CAS number</u> 1330-20-7 100-41-4	<u>Concentration</u> 7 - 13 1 - 5

Section 16. Other information

Hazardous Material Information System (U.S.A.)

Health : 3 * Flammability : 3 Physical hazards : 0

(*) - Chronic effects

Caution: HMIS® ratings are based on a 0-4 rating scale, with 0 representing minimal hazards or risks, and 4 representing significant hazards or risks. Although HMIS® ratings and the associated label are not required on MSDSs or products leaving a facility under 29 CFR 1910.1200, the preparer may choose to provide them. HMIS® ratings are to be used with a fully implemented HMIS® program. HMIS® is a registered trademark and service mark of the American Coatings Association, Inc.

The customer is responsible for determining the PPE code for this material. For more information on HMIS® Personal Protective Equipment (PPE) codes, consult the HMIS® Implementation Manual.

National Fire Protection Association (U.S.A.)
