August 24, 2005

Delfleet Evolution Low Gloss ***FDGH Flattened Colors***

This bulletin has been revised due to an error and will replace bulletin #477. Please discard the old one.

New F3118 Flattening Binder offers low gloss options for FDGH.

With the introduction of the new F3118 Delfleet Evolution Flattening Binder, customers will be able to spray FDGH in one of three gloss levels; matte, satin or semi-gloss. Low gloss colors can be obtained in three ways:

- Low gloss black has been pre-formulated and added to the color database. For reference, the codes are:
 - 911678—Matte black
 - 911679—Satin black
 - 911680—Semi-gloss black.
- To obtain a flattened version of an existing FDGH color, customers need to contact Customer Service in Strongsville. A customer service representative will calculate the correct matte, satin or semi-gloss formula. The phone number is 1-800-647-6050.
- If a customer requires a specific gloss level match, a panel can be matched via the Color Lab as a standard request. These will be added to the database as a new color code.

Please refer to your updated FDGH P-sheet, DFT-002 (10/2019), for new mix ratio and other important technical information.
