PPG SPEEDHIDE® zero Interior Latex Sealer is a professional grade zero-VOC** interior acrylic primer formulated to meet the performance requirements of professional applicators. SPEEDHIDE® zero Interior Latex Sealer can be used as a primer under alkyd or latex finish coats and is ideal under a variety of finishes. This zero-VOC**, low-odor paint is ideal for painting occupied spaces while delivering the durable product performance required. It provides excellent sealing properties. Recommended for use on properly prepared interior wallboard and drywall surfaces, wood, and oriented strand board or particle board, and masonry.

**PRODUCT DATA**

<table>

</table>

**WEIGHT/GALLON:** 10.8 lbs. (4.9 kg) +/- 0.2 lbs. (91 g)

**COVERAGE:** Approximately 400 sq. ft./gal. (37 sq. m/3.78L) per U.S. Gallon (3.78L) on smooth, nonporous surfaces.

**Wet Film Thickness:** 4.0 mils

**Dry Film Thickness:** 1.4 mils

Coverage figures do not include loss due to surface irregularities and porosity or material loss due to application method or mixing.

**DRYING TIME:**

To Touch: 30 minutes

To Recoat: 4 hours

Drying times listed may vary depending on temperature, humidity, film build, color, and air movement.

**CLEANUP:** Clean tools with warm soapy water.

**DISPOSAL:** Contact your local environmental regulatory agency for guidance on disposal of unused product. Do not pour down a drain or storm sewer.

**FLASH POINT:** Over 200°F (93°C)

**APPLICATION INFORMATION**

Stir thoroughly. When using more than one container of the same color, intermix to ensure color uniformity. USE WITH ADEQUATE VENTILATION. KEEP OUT OF REACH OF CHILDREN. Read all label and Material Safety Data Sheet (MSDS) information prior to use. MSDS are available through our website or by calling 1-800-441-9695.

**Application Equipment:** Apply with a high quality brush, roller, paint pad, or by airless spray equipment. Where necessary, apply a second coat.

**Airless Spray:** Pressure 2000 psi, tip 0.015” - 0.021”

Spray equipment must be handled with due care and in accordance with manufacturer’s recommendation. High-pressure injection of coatings into the skin by airless equipment may cause serious injury.

**FEATURES / BENEFITS**

- 0 g/L VOC**
- Low odor
- Fast drying
- Great adhesion
- Excellent sealing properties
- Great enamel holdout
- Soap and water clean-up
- MPI approved
- Can earn LEED 3.0 credits

**Benefits**

- Meets the most stringent environmental regulations nationwide
- Ideal for painting in occupied spaces
- Same day topcoat turning jobs faster
- Improves durability of finish
- Provides a uniform finish
- Promotes even sheen in topcoats
- Safe waterborne formula
- Meets strict performance and aesthetic requirements
- Contributes to sustainable design

**Colorants added to this base paint may increase VOC level significantly depending on color choice.**
GENERAL SURFACE PREPARATION

Surfaces to be coated must be dry, clean, sound, and free from all contamination including loose and peeling paint, dirt, grease, oil, wax, concrete curing agents and bond breakers, chalk, efflorescence, mildew, rust, product fines, and dust. Remove loose paint, chalk, and efflorescence by wire brushing, scraping, sanding, and/or pressure washing. Putty all nail holes and caulk all cracks and open seams. Sand all glossy, rough, and patched surfaces. Feather back all rough edges to sound surface by sanding.

WARNING! If you scrape, sand, or remove old paint, you may release lead dust or fumes. LEAD IS TOXIC. EXPOSURE TO LEAD DUST OR FUMES CAN CAUSE SERIOUS ILLNESS, SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE. Wear a properly fitted NIOSH-approved respirator and prevent skin contact to control lead exposure. Clean up carefully with a HEPA vacuum and a wet mop. Before you start, find out how to protect yourself and your family by contacting the USEPA National Lead Information Hotline at 1-800-424-LEAD or log on to www.epa.gov/lead. In Canada contact a regional Health Canada office. Follow these instructions to control exposure to other hazardous substances that may be released during surface preparation.

GYPSEM WALLBOARD-DRYWALL: Nails or screws should be countersunk, and they along with any indentations should be mudded flush with the surface, sanded smooth and cleaned to remove any dust before priming the substrate.

MASONRY: New masonry should cure for at least 30 days and preferably 90 days prior to priming and painting. The pH of the substrate must be less than 10 before priming with an alkali resistant primer.

ORIENTED STRAND BOARD: Countersink all nails or screws and putty flush with the surface. Surface should be cleaned to remove any dust or contaminants before priming the substrate.

PARTICLE BOARD: Countersink all nails or screws and putty flush with the surface. Surface should be cleaned to remove any dust or contaminates before priming the substrate. (Veneered surfaces should be sanded smooth and cleaned to remove any dust or contaminants, before priming the substrate.)

WOOD: Unpainted wood or wood in poor condition should be sanded smooth and wiped clean before priming the substrate. Spot prime knots or resinous areas before the application of the first full coat of primer. Nails or screws should be countersunk, and they along with any indentations should be mudded flush with the surface, sanded smooth and cleaned to remove any dust before priming the substrate.

LIMITATIONS OF USE

FOR INTERIOR USE ONLY.

Apply when air, surface and product temperatures are between 50ºF (10ºC) and 90ºF (32ºC).

Not recommended for use on floors.

PROTECT FROM FREEZING.

PACKAGING

1-Gallon (3.78 L)
5-Gallon (18.9 L)

TINTING AND BASE INFORMATION

Refer to the appropriate color formula book, automatic tinting equipment, and or computer color matching system for color formulas and tinting instructions.

6-4900XI White

Some colors, drastic color changes, or porous surfaces may require more than one coat to achieve a uniform finish.
